About Insects: A Guide for Children by Cathryn Sill ...

A third of all the food crops that we grow need insects to pollinate them 87% of all our plants are pollinated by animals - and most of this is delivered by insects Without insects, we risk ecological collapse - putting in danger multitudes of birds, bats, reptiles, amphibians, small mammals and fish that rely on insects for food.

Take Action for Insects | The Wildlife Trusts

There are so many reasons why insects and other bugs and minibeasts should be welcomed to our outdoor spaces. They can be an important source of food for other animals like birds and bats, essential to pollinate our flowering plants and crops, predators to other insects like aphids, and useful workers when it comes to decomposition and giving us nutrient rich soil.

Homes for Insects and Minibeasts - The RSPB

Insects are a readily available source of carbohydrates, fats, proteins, vitamins, and minerals. They are a great opportunity especially in less wealthy nations to produce necessary food while also helping to preserve the environment. Farming insects can help alleviate pressure from climate change, food shortages, and lack of land availability.

Insect Farming Ultimate Guide and Examples - GroCycle

What is an insect? Broadly speaking, invertebrates are animals without a backbone and include multi-legged, hard-bodied minibeasts, known as arthropods, as well as corals, slugs and snails, worms and soft-bodied sea creatures. Arthropods can then be separated into groups including crustaceans (such as crabs and woodlice), spiders and insects.
