When setting up a small business accounting system, you need to choose a method of recording financial transactions. There are basically two methods of recording income and expenses - the cash basis and the accrual basis of accounting. Cash-basis. Under the cash-basis method of accounting, you record income and expenses when cash transactions are done. For example, you record revenue for a product only when the customer pays you for the product.

First, we'll start with the simpler of the two methods: cash basis accounting. With this method, you record income as it's received and expenses as they're paid. For example, if you invoice a client for \$1,000 on March 1 and receive payment on April 15, you would record the income as received for the month of April. This is when you actually had the money in hand.

Under the accrual basis of accounting (as opposed to the less-preferred cash method of accounting), revenues are recorded when they are earned, not when the company receives the money. Recording revenues when they are earned is the result of one of the basic accounting principles known as the revenue recognition principle.
