In other words, Life 3.0 is the master of its own destiny, finally fully free from its evolutionary shackles. The boundaries between the three stages of life are slightly fuzzy. If bacteria are Life 1.0 and humans are Life 2.0, then you might classify mice as 1.1: they can learn many things, but not enough to develop language or invent the internet.

Depending on how the variables above play out in the near future, AGI can bring vastly different outcomes in the next 10,000 years and beyond. In the book, Tegmark explores various options where humans and Life 3.0 coexist peacefully, where Life 3.0 doesn't exist, or where humans don't exist. He further explains why humans are barely scratching the surface of what's possible based on the laws of physics.

bestseller tackles some of the biggest questions raised by the advent of artificial intelligence. Tegmark posits a future situation where artificial intelligence has surpassed our own – an era he terms “life 3.0” – and explores what this might mean for war, justice, the job market, and humanity’s own sense of self.
