Mehran Kardar, Statistical Physics of Fields
The second of two volumes on statistical mechanics. It cuts a concise path through the subject, at the expense of being a little telegraphic in places. It is based on lecture notes which you can find on the web; a link is given on the course website.

Volume 2: The Classical Theory of Fields.

(1951). Review by: Edward Lee Hill.

Mathematical Reviews, MR 0143451 (26 # 1007).

The present edition has been expanded by about 50 pages, mostly by extension of the discussion of the general theory of relativity. The scope and pedagogical intent of the book are substantially unchanged from the first edition.

If Landau and Lifshitz were to prepare a new edition of their classic *Statistical Physics* text they might produce a book not unlike this gem by Mehran Kardar.
